

2018 MAJOR – Environmental Earth Science

(Qualifying Major for Bachelor of Science with the degree of Bachelor of Laws)

Environmental Earth scientists have an appreciation of earth surface processes and environmental systems and are able to use evidence from the landscape to address challenging environmental issues. The Major in Environmental Earth Science provides a solid foundation for environmental inquiry by developing an understanding of global processes spanning, geomorphological, geological, biological, ecological and chemical concepts and understanding how these systems are influenced by human impact and management. This program provides a 'hands-on' approach to skills development with a focus on in-field training that allows the capacity for independent and team-based scientific inquiry. It encourages the development of essential field and analytical skills, critical thinking, communication and problem solving in an effort to produce environmental earth scientists with a broad but comprehensive skill set and knowledge base that can be applied to a range of professional roles within the workforce.

The table below is a suggested first year program guide to support your enrolment. Please make your selection of units after reviewing the requirements of your award in the 2018 Handbook:

www.handbook.mq.edu.au/2018/DegreesDiplomas/Degree/Bachelor+of+Science+with+the+degree+of+Bachelor+of+Laws

Suggested First Year			
Session 1, 2018		Session 2, 2018	
Unit Code	Unit Name	Unit Code	Unit Name
LAW115	Foundations of Law	LAW109	Criminal Justice
ENVS117	Biophysical Environments	LAWS108	Law, Lawyers and Society
GEOS112	The Planet Earth	LAWS104	Contracts
MATH111 or STAT170	Quantitative Methods for Science Introductory Statistics	Elective	Choose a People or Planet unit

- You must also meet the general requirements for the degree for which you will qualify.
- It may be possible to satisfy the requirements of your degree by taking a different selection of units in your first year from those suggested above.
- A knowledge of Mathematics and Statistics is required for the Bachelor of Science [one of MATH111, MATH135 and STAT170 is recommended] and will be helpful for the Environmental Earth Science Major.
- A variety of first year Mathematics units are available [MATH111, MATH130, MATH135], depending on previous study. Popular electives for Environmental Earth Science students include either ENVS117 or GEOS112 (depending on which is taken as pre-requisite), other environmental science units (ENV118), Geology (GEOS125, GEOS126), Biology (BIOL115) and Statistics (STAT170, STAT171). Some units are available in more than one session.

- Consider what units you will want to study in second and third year. Prerequisite requirements for those units must be completed prior to enrolment in the higher-level unit. In the second year of the Environmental Earth Science major students may take any ENVE, ENV GEOS and BIOL unit at 200 level. Some of these units have prerequisites not included in the Environmental Earth Science major list here, so it is important to check these before planning your first year choices. ENVE266 is the prerequisite for most of the 300 level units so it is important that this unit is passed with a strong grade.
- All students must complete one People unit and one Planet unit. Criteria and available units can be viewed at www.handbook.mq.edu.au/2018/Units/Planet and www.handbook.mq.edu.au/2018/Units/People.
- Most of the units within this major include; fieldwork, student research projects, a practical component, and can be conducted by distance education (although attendance for brief on campus sessions is required).
- Bridging courses are available in February and recommended for those without recent HSC study: <http://web.science.mq.edu.au/bridging-courses>.
- You can receive specific program advice from the faculty at any stage in your degree by lodging a “Program Advice” enquiry via <http://ask.mq.edu.au>.
