

2019 MAJOR – Environmental Earth Science

(Qualifying Major for Bachelor of Science)

Environmental Earth scientists have an appreciation of earth surface processes and environmental systems and are able to use evidence from the landscape to address challenging environmental issues. The Major in Environmental Earth Science provides a solid foundation for environmental inquiry by developing an understanding of global processes spanning, geomorphological, geological, biological, ecological and chemical concepts and understanding how these systems are influenced by human impact and management. This program provides a 'hands-on' approach to skills development with a focus on in-field training that allows the capacity for independent and team-based scientific inquiry. It encourages the development of essential field and analytical skills, critical thinking, communication and problem solving in an effort to produce environmental earth scientists with a broad but comprehensive skill set and knowledge base that can be applied to a range of professional roles within the workforce.

The table below is a suggested first session for students beginning in Session 2, 2019. Please make your selection of units after reviewing the requirements of your award in the 2019 Handbook:

Suggested First Session

Session 2, 2019

Unit Code	Unit Name
ENV118	Environmental Management
STAT170	Introductory Statistics
Elective	GEOS or BIOL unit at 100 level
Elective	Choose an elective unit

- You must also meet the general requirements for the degree for which you will qualify.
- It may be possible to satisfy the requirements of your degree by taking a different selection of units in your first session from those suggested above.
- A variety of first year Mathematics units are available [MATH111, MATH130, MATH135], depending on previous study. Popular electives for Environmental Earth Science students include either ENV117 or GEOS112 (depending on which is taken as pre-requisite), other environmental science units (ENV118), Geology (GEOS125, GEOS126), Biology (BIOL115) and Statistics (STAT170, STAT171). Outside the Faculty of Science and Engineering, ACSC100 is a unit designed to help science students with writing skills.
- Consider what units you will want to study in second and third year. Prerequisite requirements for those units must be completed prior to enrolment in the higher-level unit. In the second year of the Environmental Earth Science major students may take any ENV117, ENV118, ENV119, ENV120, ENV121, ENV122, ENV123, ENV124, ENV125, ENV126, ENV127, ENV128, ENV129, ENV130, important that this unit is passed with a strong grade.

- For a double major complete required units for both majors where possible in the first year. If considering a double major consult the criteria found at www.handbook.mq.edu.au/2019/Majors.
- Most of the units include; fieldwork, student research projects, a practical component, and can be conducted by distance education (although attendance for brief on campus sessions is required). A knowledge of Mathematics and Statistics is recommended and will be helpful for the Environmental Earth Science Major.
- Bridging courses in mathematics are available and recommended for those without recent HSC study: www.tinyurl.com/bridgingmq.
- You can receive specific program advice from the faculty at any stage in your degree by lodging a “Program Advice” enquiry via <http://ask.mq.edu.au>.
